STAT

Re our conversation of last Thursday and possible OCR dissatisfaction with CRG arrangements for notifying them of declassification or downgrading actions taken. I talked with [redacted], with the following results.

STAT

The OCR contingent at the meeting with ODP was not voicing dissatisfaction with either CRG or our arrangements with them. Rather, they were discussing internal problems. For example: CRG now gives OCR a fiche listing all downgrading or declassification actions. Since there is no compatibility between the CRG and OCR automated record keeping system, OCR must manually look up documents to determine whether CRG has taken any action to lower the classification. I told him that when the CRG DARE system goes on line the OCR Library in all probability will have a terminal enabling them to query DARE directly. They are thinking of giving requested documents to the customer and requiring him to determine their present classification. The customer would be warned with a caveat stamped on the document that the classification may have to be changed. No decision yet on this, but it is in the thinking stage.

Also, OCR continues to be dissatisfied with the continued "failure" of IPS to notify them of declassification actions taken. I told [redacted] that when CRG achieves a mutually satisfactory arrangement with IPS for notification to CRG, then the actions taken by IPS should show up on the fiche that we give to OCR. Thus, they will at least receive notification in a roundabout manner.
